Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 3/5/2004; 3/29/2004 and 5/9/2005 are being considered by the examiner.

Drawings

2. Figures 1-3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 8-13, 16-24, 34 and 35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. These claims comprise variables that are not defined in the claims. A definition of these variables must be found

in the claims to distinctly claim the subject matter, which Applicant regards as his invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-6, 25-32 and 37-42 are rejected under 35 U.S.C. 102(e) as being anticipated by Harrison et al (US 6,434,366).

Regarding claim 1, 31, 37 and 41, Harrison discloses an apparatus and a method of estimating adaptive array weights used to transmit a signal to a receiver in a wireless communication system. The transceiver is shown in figure 5. A channel autocorrelation matrix is determined (column 4, lines 38-67). When a single weight is used per element, the set of weights may also be referred to as a "weight vector" (column 4, lines 12-14). Feedback from the receiver is input to the weight computer 306 in figure 5 and these weights are used to deliver the maximum power according to the correct autocorrelation matrix (column 4, lines 38-67).

Regarding claims 2, 4-6, 32 and 42, the matrix A is generated according to the auto correlation matrix as stated in column 4, lines 38-67. The transmitted signal will be

received at the receiver (subscriber unit). The subscriber unit will transmit transmitter control data to adapt the weights in the transmitter (column 4, lines 9-37).

Regarding claim 3, the communication system is a CDMA system (column 3, lines 39-42).

Regarding claims 25-30, Harrison further discloses the transmitter control data provides the base transceiver information necessary to modify the traffic channel signals in a way that enhances the gain of the antenna array for the particular location of the subscriber units (column 4, lines 1-5).

Regarding claims 38-40, the transmitting antennae are connected as shown in figure 5.
